RFoF links can be used for a number of applications, from teleports to timing. ViaLite will have the RF band for you! You can’t stretch fiber so make sure you know your required link distance. ViaLite goes the extra mile connecting distances 0-600 km apart.

The most common cause of primary link failure is the cable being damaged. Ensure five nines reliability (99.999%) and make sure you have a redundancy system in place.

Add a ViaLite powering function to your RFoF link check list. Make sure that your LNBs and BUCs power up when you switch them ON so that you don’t blow a fuse!

98% of organizations say a single hour of downtime costs over $100,000.

Are you RFoF savvy?
